Gold Honey - A combination of Greek flower varieties

G old Honey - Flower varieties

About G old Honey

Gold Honey, from a combination of flower varieties, is a supreme quality Greek Honey produced by the nectar of wild flowers and forest (chestnut trees). It is a highly nutritious honey with an aroma that stimulates the senses of the most demanding consumer.

Our beekeepers, with great care and caution, maintain the beehives throughout the year so that the bees are healthy and able to collect the best quality material from the flowers, and process it under the most favourable conditions.

After the harvest, the quantities of our honey are transported to standardized facilities. There, without removing any essential ingredients of the honey or adding foreign substances and without heat treatment which destroys the natural enzymes and vitamins, our products are packed in accordance with the latest health and safety standards. This keeps their physical & nutritional characteristics unaltered, creating a premium quality product for you.

With G old Honey, we invite you to discover the flower varieties of Greece through a journey of taste.

Enjoy it!

Specifications
